

Easy steps to recycle PET bottles

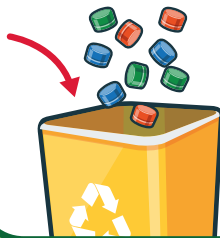

1. Check if the following symbol or "No. 1" is at the bottom of the bottle.

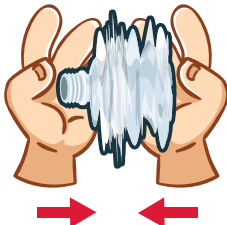

2. Drain any remaining water or liquid.

3. Take off the cap.

4. Crush the bottle.

5. Throw it in the recycling bin.

Did you know that...

... PET is widely used in making packaging, including water bottles and food containers in a variety of shapes and sizes? PET is valuable because it can be reproduced into many types of products. Our packaging plants also manufacture recyclable HDPE plastic caps.

What are the benefits of recycled PET bottles?

Most recycled PET bottles are made into synthetic fibers for textiles, filters, belts, packaging, and home furnishings and carpets. PET bottles can also be recycled into food containers. Major beverage manufacturers currently use bottles from recycled PET granules while some use up to 100% recycled PET granules.

How can recycled PET bottles help save energy?

PET bottles are made from non-renewable crude oil, therefore, recycling one ton of PET bottles will help save up to 3.8 barrels of oil (159.11 liters) and landfill space or up to 5.7 cubic meters. Every kilogram of PET bottles that is recycled therefore means less landfill is used, while also reducing the use of crude oil, and contributing to a cleaner environment.

Save a bottle, save the planet!

Indorama Ventures

is the largest PET manufacturer and proud to be leader in recycling in Thailand, Europe and North America.

PET LIFECYCLE

THE CYCLE OF RECYCLED PET

Did you know that...
... PET bottles are the easiest plastic to recycle? There's no limit to how many times they can be recycled, they can also be reused in several ways, and the buying price is also high, which means you can put a little change in your pocket.

As the largest PET manufacturer, Indorama Ventures knows that it is very important to support and increase recycling in order to make the most of our available resources, to protect and save the environment, reduce the flow of waste, and create jobs. We established recycling plants in Thailand, the US, Mexico, France, the Netherlands, and Ireland to buy PET bottles from waste sorters as material for production into recycled fibers.
